

Top 10 Reasons why Central Heating is the Best Investment

So, you have been considering central heating? We believe it will be the best investment you can make in your home for your family. In fact, it would be a disservice to you if we did not impart the value of central heating.

Top 10 Benefits of Central Heating

Comfortable

The pleasurable feeling of enveloping warmth from warm water central heating is unobtainable from other forms of heating. It is the only heating method that heats the whole home evenly, allowing you to make full use of your home year-round.

Healthy

The even temperature of a home with central heating is better for your respiratory system and the gentle radiant heat does not blow dust or allergies around, keeping your home healthy.

Efficient and Effective

Placing small amounts of heat around a home is much more efficient than a single large heat source attempting to heat a home. It also gives a more even temperature spread so it's much more effective. Water transfer energy around the home much more efficiently than moving air and people feel much warmer when heated radiantly (e.g. radiators/ underfloor) than when heated with air (e.g. convection).

Silent

Underfloor and radiator heating are silent meaning warm water central heating is totally silent and much more enjoyable for relaxing, socialising, and just living without the intrusion of noise or fluttering newspaper from blown air.

Convenient

The ease of living with an automated heating system is one of the most desirable reasons customers chose warm water central heating. Usually, it is a case of set and forget, but there are app-based control systems that can add more flexibility.

Future Proof

The ability to change how the system is powered over the lifetime of the home is a great reason to invest in warm water central heating. And, installing underfloor pipes in a new home floor slab at the construction stage is an opportunity too good to miss.

Flexible

Choose from a range of different heat sources and heat distribution combinations to get the best performance and cost benefits for your lifestyle.

Warranties

We value quality. We believe that the products we import to New Zealand and install into your homes are the definition of quality to ensure the gentle, enveloping radiant heat in every room of your home. The companies we partner with proudly stand by the quality, innovation, reliability, energy efficiency and overall durability of their products and each product offers warranties to protect you and your system.

Custom systems for you

Our team will communicate with you to ensure that the heating system is custom designed for you. Whether it is a new or existing home, our heating engineers will calculate the heat demand for each

room of your home. Their calculations take into consideration insulation, air tightness, ceiling height, window size, incidental heat, and solar gain. These calculations help to determine the size of the heat source and emitters your home would require.

Expert advice

We are experts in heating New Zealand homes and can offer you professional heating advice to get the most efficient and effective heating for your home. We have the skills, products, and people to help you. Get expert technical advice and customer support and be assured that we import only the highest quality European products.
