

# Towel Rails

## Advantages of Towel Rails

Everybody enjoys reaching for a warm towel after a relaxing shower, especially during the cold winter months. Heated towel rails make this a possibility as well as being a stylish and practical addition to your central heating system.

Central Heating New Zealand offer a wide range of high-quality DeLonghi towel rails that add a gentle, warm ambience to your bathroom while drying your towels. With so many options, the difficulty is choosing the right towel warmer. Towel rails with a flat profile help maximise space, while a curved profile is better suited to a larger bathroom.

Flat panels and geometric rails create a bold, designer look that makes a statement and complements modern design. Choose a chrome finish if you want a classic, timeless look that matches other bathroom fixtures or a coloured finish if you want a stand-out feature. The options are endless and should be explored.

- Higher heat output than most electric towel rails
- Use with central heating system or when fitted with electric elements
- Select white, chrome or a painted finish
- Choose from a variety of styles to complement your bathroom aesthetic

## Why add a towel rail to your central heating system?

DeLonghi towel rails are an ideal complement to any central heating system. Available in either chrome or painted finish, they warm up towels while providing some heating for the room. Commonly used in bathrooms, they are also very useful in laundry areas or kitchens.

Electric elements can be fitted to the towel rails so they can be used without a central heating system or if the system is turned off (for example, during the summer months). It is most cost effective to install the towel rails as part of your system.

— Richmond Straight Linea in white (left) and Parentisi Curved in chrome (right)

— Agata Linea in anthracite (left) and white (right)

Product Code	Style	Finish	# Rails	Output	Dimensions
